## SAVANT MULTISTAT

Intelligent climate control in tandem with sophisticated home automation, the Savant Multistat lets you orchestrate all the comforts of home at a touch.

## VERSATILE

The Savant Multistat has stylish finish options with a high resolution touchscreen that looks great on the wall, or can be hidden from sight for a clean look using remote mounted sensors.

## QUICK SETUP

The Savant Multistat is easy to set up and configure using the new On Screen Wizard, allowing Savant Integrators and HVAC professionals to fully set up and test the Multistat prior to integration with a larger control system.

## GUESSWORK ELIMINATED

Easy to use touch interface with shaded background that displays heating and cooling status. Integrates with the Savant Host to create and manage schedules based on time of day, day of week or day of the year to suit your life across the seasons.

## CLIMATE OPTIMIZED

The Multistat includes an integrated humidity sensor and a remote mounted temperature sensor for precise temperature readings from just the right spot. Additional optional sensors include outdoor temperature sensors, vent sensors, air return sensors and more.

## WAY BEYOND CLIMATE CONTROL

Control is at hand as the high resolution touchscreen acts as more than just a thermostat interface and is able to activate Savant Scenes at a touch.

## SIMPLY CUSTOM

One Multistat can stand on it's own, or as part of a large system using many Multistats, Savant Climate modules and sensors to create the ultimate in custom comfort systems.

## MORE THAN A THERMOSTAT

With Multistat, whole home control is at hand. Imagine calling up a custom Savant “Relax” Scene that dims the lights, lowers the shades, cues your playlist and lights your gas fireplace.

## SAVANT CLIMATE MODULES & SENSORS

Expandable and Scalable

## OPTIONAL SENSORS

Optional sensors include humidity, indoor temperature, outdoor temperature, vent sensors, air return sensors, commercial grade plenum sensors and more.

## MORE SENSOR INPUTS

Add additional temperature or humidity sensing modules, including multiple points of room sensing, outdoor temperature and in-duct plenum sensors. Multiple zones can be used with one module, or multiple sensors can be used in a single zone.

## MORE RELAYS

Add additional modules to increase HVAC system capacity without adding additional thermostats. Add control for zones with self contained PTAC units, or add additional relay controlled devices, such as humidification, dehumidification, or extra zone dampers.
